## Heated Jacket Liner Information

Heated Clothing designed by motorcyclists.

THEY ARE HERE!!! The original heated jacket liners designed and manufacturd by Warm & Safe Heated Gear, LLC, the makers of the original turner-upper-downer thingy for DC power known as the Heat-troller. Developed over the course of many years of touring and riding all over the world, we have designed this liner with many features we consider essential - not gimmicks. In fact, once you take a look at the features in this innovative liner, we think you'll agree this is the best heated jacket liner on the market!

Women! One thing to think about before buying heated clothing. We have women's cut and sizing heated clothing! Designed by a woman for women, it has all the great features of the men's liner but with shaping where it counts, dropped back hem for warming the lower back and a shorter length so that it won't stick out from under your leather jacket. And they are 30% lighter than the men's liner and they develop as much heat with less power draw. Check it out!

1. The Warm & Safe Heated Liner Jackets are made to be light, thin and body fitting using non-coated Nylon Taffeta, with Polartek Fleece at the neck, which is also heated, providing comfort while free of moisture. The non-coated material allows the liner to breath and moisture to get out. The Polartek Fleece keeps the wet from rain away from your neck.

Lycra stretch panels allow a form fitting close fit to the body without sacrificing comfort, and allow optimum heat transfer to the body.

This garment is designed to deliver serious heat in an instant when the weather is seriously cold. There is heat in the sleeves, in the front, in the lower back, in the upper back and in the neck for full heat coverage.

Our liner is designed to be temperature neutral. As you ride through warm and cold zones you won't have to stop by the side of the road to dress and undress.

2. Zippered hand pockets and integrated plugs for connecting gloves and pants are also hidden in small zippered pockets when not in use. Eureka! No more dangly cords when sipping coffee at the cafe...

All our liners come wired with glove and pants connectors. All the wiring is in parallel so that if one wire fails, the whole liner does not. But with our unique wiring for gloves and pants, you can, with slight modification, run Widder gloves with our liners.

3. Because of an ingenious design, we have made each Liner capable of running with either a single

or dual heat-troller.

4. Every Warm & Safe Liner comes with a stowing pouch so that you can pack it away using minimal space when not in use.

5. Since we developed the use of the DC Coax Power Plug and Jack for Heated Clothing, ALL Warm & Safe Heated Clothing use our designed Connectors which give a better connection, are smaller, and are plug compatible with others on the market.

6. And they are warm! The Men's Heated Liner Jacket produces 100 Watts of heat with a draw of 8A at 12.8v.

The Women's Heated Liner Jacket produces 92 Watts of heat with a draw of 7.5A at 12.8v.

Please Take Note. Our Heated Clothing does not come with a Heat-troller or an ON/OFF Switch or even a Battery Harness. Our Heated Clothing Gets Too Warm to Use Without a Heat-troller. If you don't Have a Heat-troller, Remember to Order One.

**WARRANTY!!** This product is warranted to be free from defects in materials and workmanship for a period of One year. Manufacturing defects in the Electronics are guaranteed for the life of the garment. Heat-troller purchased with OUR liners and used only with OUR liners are guaranteed for 5 years!

There are other neat features to our Warm & Safe Heated Liner and Vest that will please you and make sure you stay warm when cold and not when it warms up outside.
